

# Math Facts – Speed Tests

## Notes for the Teacher:

- What grade level? I see these sheets as being best for 5th grade, although I could see them being used in 4th, and I have used them as late as 7th grade.
- Prerequisites. Before doing these sheets, it is important that most all of the students have learned the math facts by heart. These sheets are merely intended to review and polish what has already been learned, and to increase the speed with which the students do calculations.
- Weekly practice. If all of the math facts have been pretty much learned by heart, using these sheets two or three times per week should be adequate. Each sheet has 60 problems – an even mix of addition, subtraction, multiplication and division that should be able to be done easily in your head. There are 60 sheets in total. Of course, if you run out of sheets, then you can always start again from the beginning.
- How to use these sheets.
  - This should be fun and easy for the students. If successful, it will build their confidence.
  - It is important to make sure that these sheets don't become torture for the students.
  - The purpose is for the kids to increase their calculation speed. These sheets are not intended to help kids memorize facts. I find that they double or triple the kids' speed, if done regularly (e.g., twice per week) through the year.
  - Talk with the students about why it is important not to compare yourself to others. The goal is for each individual student to improve.
  - I recommend giving the class exactly 2½ or 3 minutes to work on a sheet; they get as far as they can in that time. Those who can finish the entire sheet, can time themselves. For the purpose of timing, I try to start exactly when the classroom clock's second hand is on the 12. At the end I simply read the answers (quite quickly), and they mark how many they got correct.
